

Product specification

Brightness sensor

HD-S107

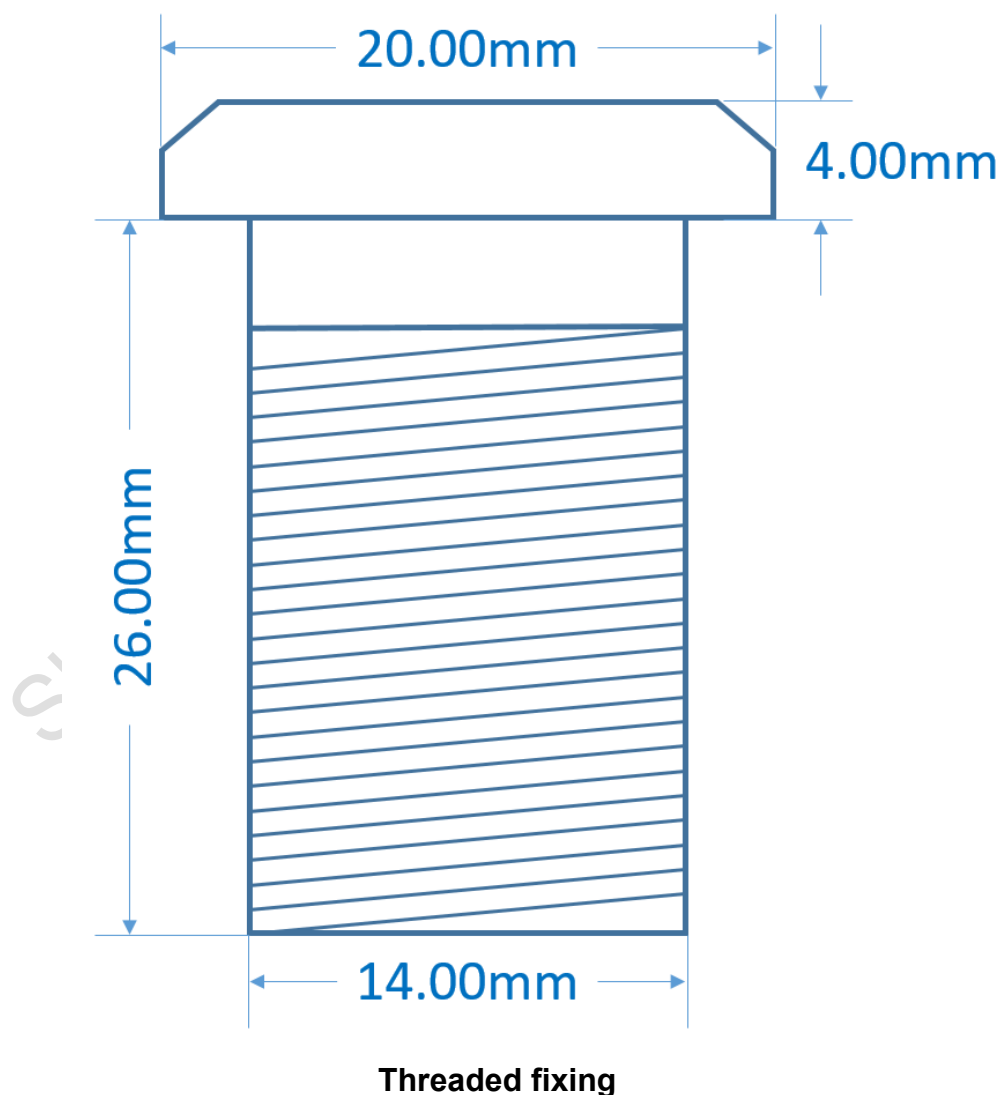

V2.0 20190507

The S107 is a brightness sensor that is connected to the LED display control system to change the brightness of the LED display according to the surrounding environment brightness changes.

Technical Parameters:

Working temperature	-25~85℃
Brightness range	1%~100%
Sensitivity - high \ medium \ low	5s\10s\15s Get data once
Standard wiring length	1500mm

size:

interface:

3-in-1 interface, compatible with play box and old version control card
